The screenshot shows a Gmail interface. On the left, there's a sidebar with 'Recibidos' (4), 'Destacados', 'Pospuestos', 'Enviados', 'Borradores', 'Papelera', and 'Meet'. The main area shows an email from 'Kwik Lok' with the subject 'Chilean prunes see improvement over last season'. The email content includes an advertisement for 'LABELS BOOST SALES' and a small image of a woman sitting on a large prune. The text of the email reads: 'The big picture for Chilean dehydrated prunes producers and exporters is more positive than negative. Chileprunes said the best water conditions this year and the absence of large frosts, which wreaked havoc in 2019, make it expect a better season. The quality of the fruit looks good, with good sizes and with the expectation of generating good sugar content.' There is a 'READ MORE' button at the bottom.

Chilean prunes see improvement over last season

December 21, 2020

The big picture for Chilean dehydrated prunes producers and exporters is more positive than negative. Chileprunes said the best water conditions this year and the absence of large frosts, which wreaked havoc in 2019, make it expect a better season.

The quality of the fruit looks good, with good sizes and with the expectation of generating good sugar content.

A first approximation of how the season went. While it would not be a full harvest because a lack of winter cold elongated in duration. Indeed, in some areas and delay of flowering have been a management of orchards and also in last July, and this year the grounds

Flowering was erratic in some area elongated in duration. Indeed, in some areas and delay of flowering have been a management of orchards and also in last July, and this year the grounds

Prunes' high vitamin K content may help COVID-19 recovery

Over the past few years, enough scientific evidence has been collected to consider prunes as one of the world's best foods for the treatment of osteoporosis, a condition that affects senior citizens, especially women. And now, mere weeks ago, a team of Dutch researchers revealed a possible relationship between vitamin K, which prunes contain in abundance, and the human body's response to COVID-19.
